

Amendments to the Specifications:

Please amend the specification as follows:

In accordance with the Examiners request, please change the title of the application to:

POCKET ASSEMBLY FORMING DIFFERENT SIZE ASSEMBLAGES

Please change the paragraph beginning at page 14, line 3 and ending at page 14, line 20 to read as follows:

The lower gripper 112 cooperates with a secondary or lower shelf 138 (Figs. 4, 6 and 7) to grip an upper portion of the relatively small jacket or cover section 30. The relatively small jacket or cover section 30 has a height which is less than the height of the relatively large jacket or cover section 28. Therefore, the distance from a bottom or lower end portion 144 (Figs. 4, 5, and 7) of the pocket assembly 66 to the secondary or lower gripper 112 and secondary or lower shelf 138 is less than the distance from the bottom of the pocket assembly to the main or upper gripper 110 and the main or upper shelf 134. The distance by which the main or upper gripper 110 and shelf 134 are spaced from the bottom or lower end portion 144 of the pocket assembly 66 exceeds the distance by which the secondary or lower gripper 112 and secondary or lower shelf 138 are spaced from the bottom or lower end portion of the pocket assembly as is a function of the difference in the height of the jacket or cover sections 28 and 30. Thus, the greater the height of the tall jacket or cover section 28 relative to the short jacket or cover section 30 (Fig. 2), the greater would be the distance from the bottom or lower end portion 144 of the pocket assembly 66 to the main or upper gripper 110 as compared to the distance to the secondary or lower gripper 112.
